

## Gulf of Mexico Harmful Algal Bloom Bulletin

Region: Texas

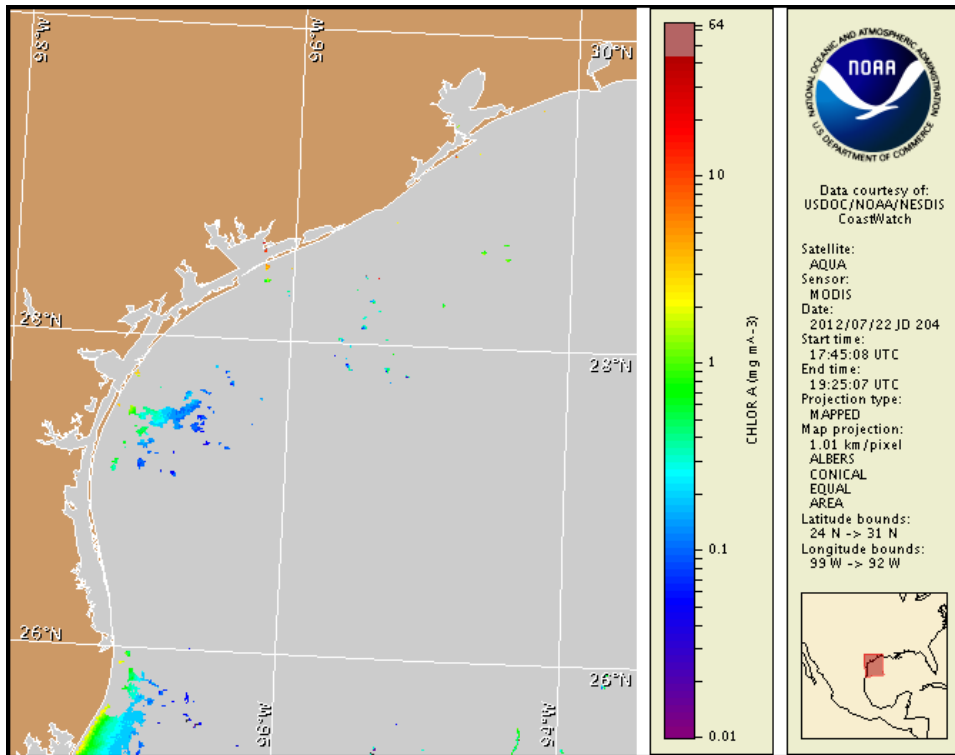

Monday, 23 July 2012

NOAA Ocean Service

NOAA Satellite and Information Service

NOAA National Weather Service

Last bulletin: Monday, July 16, 2012

Satellite chlorophyll image with possible HAB areas shown by red polygon(s). Cell concentration sampling data from July 14 to 19 shown as red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

## Conditions Report

There is currently no indication of a harmful algal bloom of *Karenia brevis* (Texas red tide) at the coast in Texas. No impacts are expected alongshore Texas today through Sunday, July 29.

## Analysis

There is currently no indication of a harmful algal bloom of *Karenia brevis* at the coast in Texas. Recent MODIS imagery (7/22; shown left) is obscured by clouds along- and off-shore the Texas coastline, limiting analysis. Forecast models based on predicted near-surface currents indicate a potential transport of 20 km north from the Port Aransas region from July 22-25.

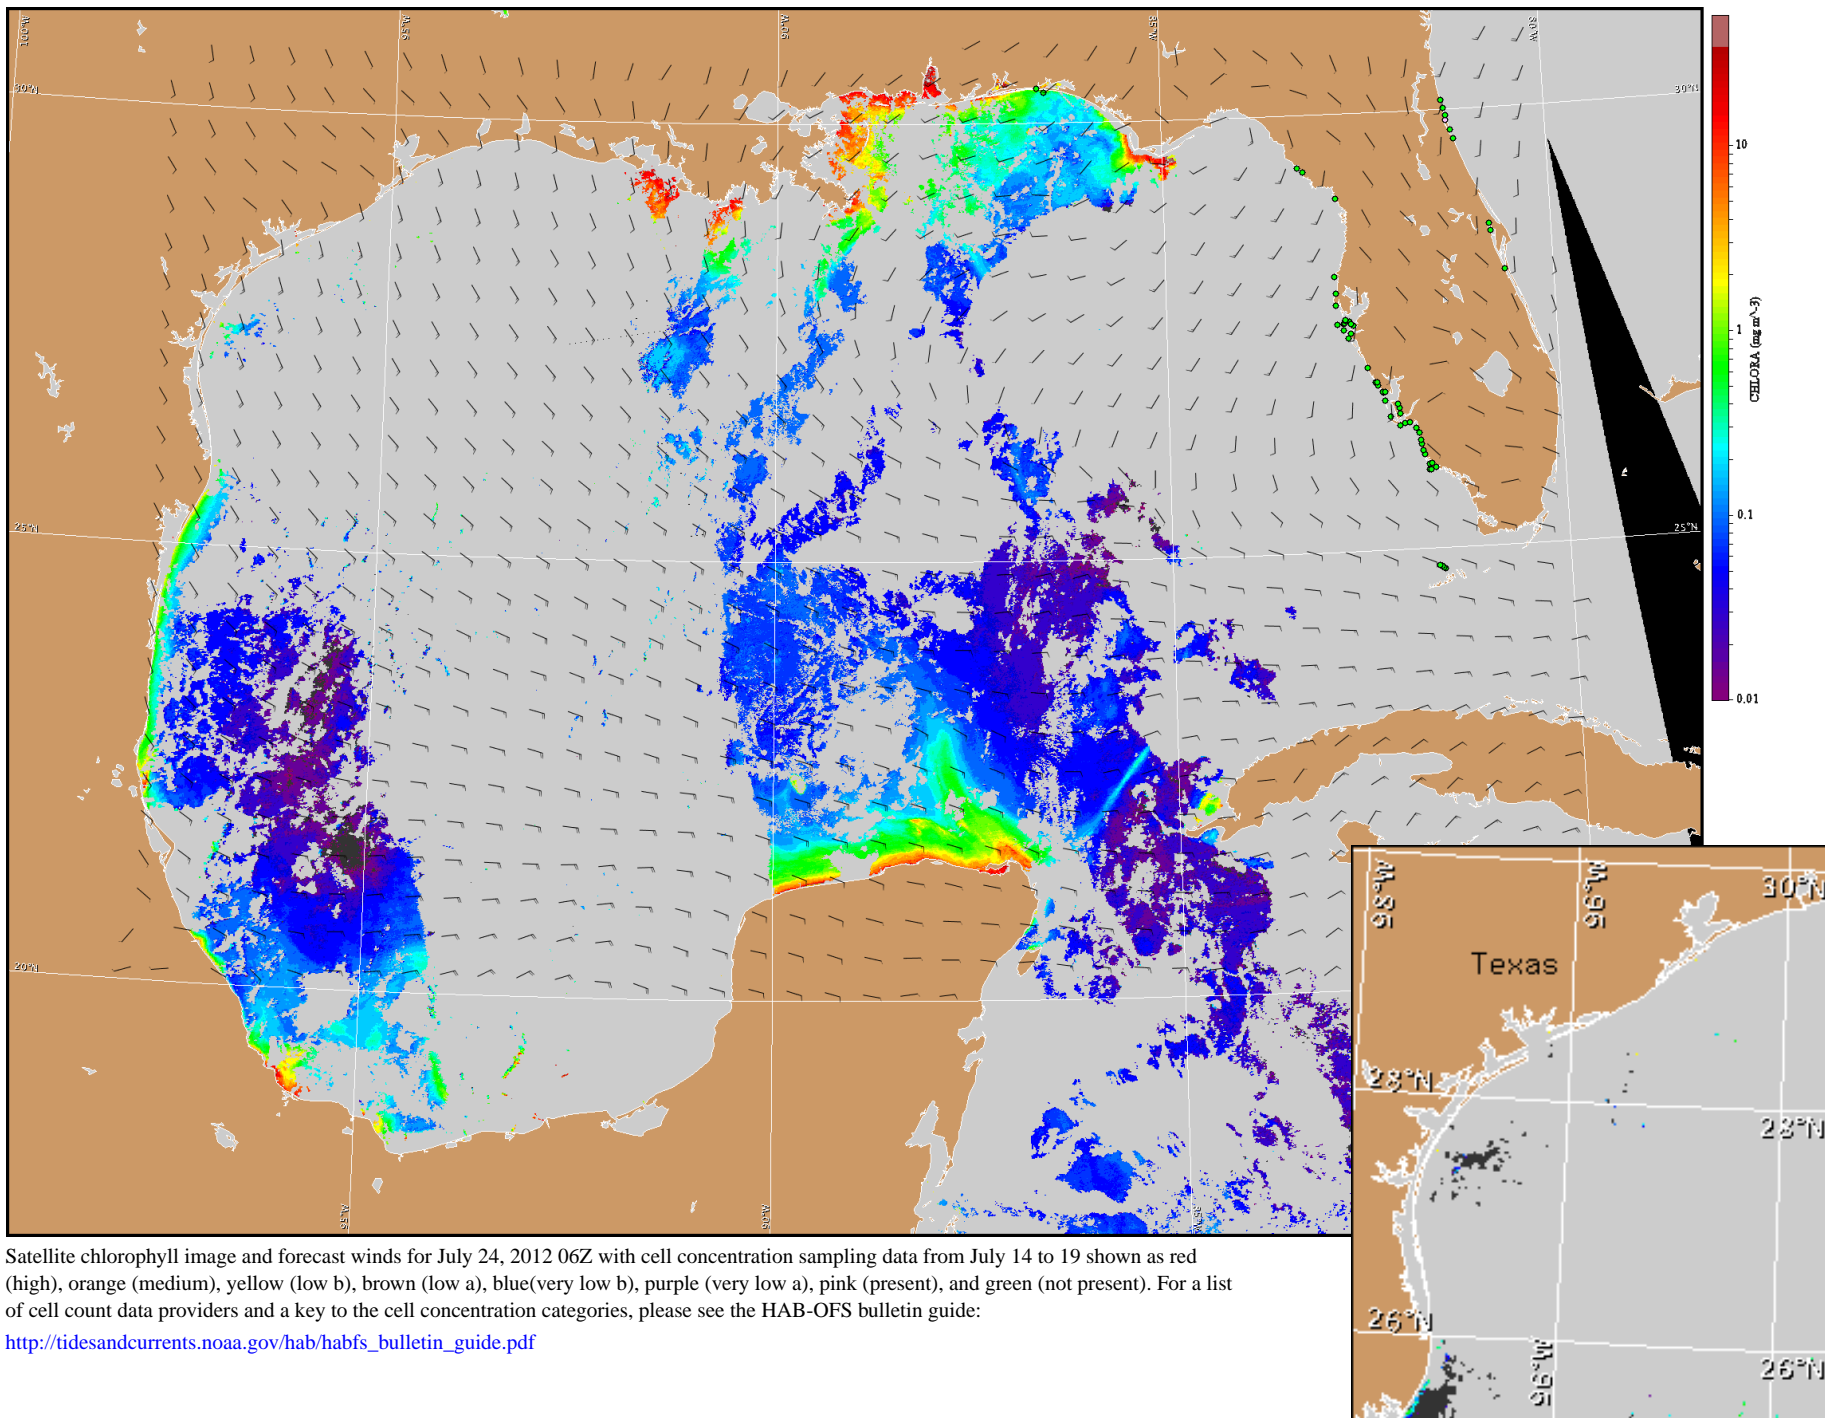

Kavanaugh, Derner, Davis

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

## Wind Analysis

**Port Aransas:** Southeast winds (10-20kn, 5-10m/s) today through Tuesday evening becoming south to southeast winds (10-20kn) Wednesday through Friday.

Satellite chlorophyll image and forecast winds for July 24, 2012 06Z with cell concentration sampling data from July 14 to 19 shown as red (high), orange (medium), yellow (low b), brown (low a), blue(very low b), purple (very low a), pink (present), and green (not present). For a list of cell count data providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

[http://tidesandcurrents.noaa.gov/hab/habfs\\_bulletin\\_guide.pdf](http://tidesandcurrents.noaa.gov/hab/habfs_bulletin_guide.pdf)

Verified and suspected HAB areas shown in red. Other areas of high chlorophyll concentration shown in yellow (see p. 1 analysis for interpretation).
